# Load useful functions -----

# Create a function that displays coefficient estimates with PCSEs
show_pcse <- function(x) {
  #' Show Beck and Katz (1995) panel-corrected standard errors standard errors
  #' for time-series cross-section linear models. Note that this code will
  #' *only* work with models estimated with the `plm` package.

  #' @param x: A `plm` linear model object.
  #'
  #' @return The `summary.plm` method for plm objects but with the Beck and
  #' Katz (1005) standard errors and associated t-values and p-values.
  #'
  #' @example show_pcse(x)

  summary(x, vcovBK(x, type = "HC1", cluster = "time"))
}

# I use `texreg` to make the tables. When using "robust" standard errors,
# `texreg` requires functions to extract the correct standard errors and
# p-values. The two functions extract the relevant items.
extract_pcse <- function(x) {
  #' Extract the Beck and Katz (1995) standard errors for use in `texreg`
  #' tables. Note that this code will *only* work with model estimated with the
  #' `plm` package.

  #' @argument x: A plm linear model object.

  #' @returns When used inside the `texreg` function with the standard error
  #' specified with the `override.se` list, this function allows the user to
  #' substitute OLS standard errors with those recommended by Beck and Katz
  #' (1995).
  #'
  #' @example texreg(x, override.se = extract_pcse(x))

  coeftest(x, vcov. = vcovBK(x, type = "HC1", cluster = "time"))[, 2]
